Prestige Index

Michael H. K. Bendels, Ruth Müller, Doerthe Brueggmann, David A. Groneberg

Source

The *Prestige Index* [...] is defined as the prestige-weighted average of the FAOR excess ε_t that is calculated over all authorship types t (i.e. for first, co- and last authorships), $\varepsilon_t = w_t(FAOR_t - 1)$, if $FAOR_t \geq 1$, otherwise $\varepsilon_t = w_t (1 - 1/FAOR_t)$ with the weighting factor w_t.
