Potential competing interests: No potential competing interests to declare.

The Authors have presented an intelligent controller for improving solar system efficiency. The comments of this reviewer are:

1. The manuscript lacks novelty and similar works have already been reported and are widely used.
2. The research gap needs to be shown and work should be done based on the gap. Regarding the same, an extensive literature review is suggested.
3. More results must be included regarding the proposed controller.
4. Conclusions must be rewritten based on the findings.
