**Potential competing interests:** No potential competing interests to declare.

This paper provides a comprehensive overview of the importance of critical research thinking in academic writing and publication success. It highlights the essential significance of critical research thinking in enabling individuals to analyze, evaluate, and synthesize information effectively. The text also emphasizes the role of critical thinking in enhancing students' and academics' abilities to critically evaluate information, construct well-supported claims, and contribute meaningfully to the academic body of knowledge. It further discusses vital elements such as critical analysis, problem-solving, creativity, synthesis of information, ethical considerations, and communication skills, underscoring the importance of honing essential thinking abilities in research endeavors. The text also points out that by developing critical research thinking skills, scholars and students can enhance their capacity to analyze data, evaluate information sources, and effectively communicate research findings. Overall, the text effectively argues for integrating critical research thinking into the academic writing process, highlighting its benefits in contributing meaningfully to the academic community, refining research capabilities, and making informed decisions based on evidence and critical analysis.

Although it provides a comprehensive overview of the topic, to further enhance the paper's value, I suggest including examples or case studies demonstrating the application of critical thinking in academic contexts. This would make the text more relatable and informative. Addressing potential challenges or barriers to developing critical research thinking skills and strategies to overcome them would enrich the discussion and provide valuable insights for readers. Additionally, exploring the role of technology and digital tools in supporting critical research thinking could add a modern and relevant perspective to the text.
