**Potential competing interests:** No potential competing interests to declare.

The authors could enhance the manuscript by reorganizing it in the following ways: 1) grouping the antidiabetic activity under a separate section; 2) including anti-fungal, anti-viral, and anti-protozoal activities from the antimicrobial activity section, as the information about anti-bacterial activities is repeated in two sections and a table; 3) adding a section on the phytochemical composition of *Ganoderma* spp.; and 4) including the pharmaceutical formulation of *Ganoderma* spp. extracts, fractions, or compounds.

It is recommended to abbreviate the species as spp. and to abbreviate the first letter of the genera when it is mentioned for the second time, except when *Ganoderma* sp. is the first word of the sentence. It is not necessary to include in parentheses when abbreviating bacteria. Additionally, some words should have spaces between them and should have a final period at the end of the sentences. Finally, the conclusion should be improved and refocused on the manuscript after rewriting.
