Dear Authors

Your efforts in developing the manuscript are appreciated. But the below revisions are needed.

Abstract

In the method part of the abstract, you mentioned "Overall cost of blood pressure control as well as cost-effectiveness for the different drug combinations were calculated." But in the results part, the result of this subject is missing.

Introduction

Please mention the aim of the study definitively. You write about the practical objectives of the manuscript.

Methods

Please explain the performed statistical analysis methods.

How did you control bias?

Results

The gathered data are not sufficient for presenting the results of cost effectiveness.

Besides using systematic random sampling, the different sample sizes in sub-groups may result in bias.

Discussion

Insert limitations of your study.
