Autosomal dominant distal renal tubular acidosis

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Autosomal dominant distal renal tubular acidosis. ORPHA:93608

Autosomal dominant distal renal tubular acidosis (AD dRTA) is an inherited form of distal renal tubular acidosis (dRTA; see this term) characterized by hyperchloremic metabolic acidosis often but not always associated with hypokalemia.
