Potential competing interests: No potential competing interests to declare.

The article makes a crucial contribution to agroforestry restoration, an essential area for environmental conservation. Agroforestry restoration not only promotes the recovery of degraded ecosystems, but also offers benefits such as biodiversity conservation, climate change mitigation, and agricultural sustainability. Therefore, the publication of this work is essential to expand knowledge and cultivate practices that promote the resilience of natural and agricultural systems. The article demonstrates a significant contribution to the area of agroforestry restoration and is recommended for publication without additional changes.
