Pyrilamine/Pamabrom/Acetaminophen

National Cancer Institute

Source

National Cancer Institute. *Pyrilamine/Pamabrom/Acetaminophen*. NCI Thesaurus. Code C29259.

A combination preparation containing pyrilamine, pamabron and acetaminophen.

Pyrilamine is an ethylenediamine antihistamine that blocks H1 receptors and exerts local anesthetic, sedative and mild analgesic activity. Pamabrom, a xanthine derivate, is a mild diuretic that helps the body to excrete excess fluid. Acetaminophen possesses analgesic and antipyretic effects. This preparation is used for the relief of premenstrual and menstrual symptoms.
