Review of: "Historical Turning Points in Medical Education"

David Savage, MD, PhD¹

1. Internal Medicine, University of New Mexico, United States

I thought this was a really nice overview. You might also mention the impact that the AMA Accelerating in Medical Education grant program had on substantial changes to the structure of UME in the United States. In particular, it helped increase the uptake of Health Systems Science curricula and competency-based assessment methods, in addition to shortening the basic science years and increasing time for career exploration in the clinical curriculum. Here is a source to help: <https://pubmed.ncbi.nlm.nih.gov/33332909/>.
