

Review of: "New Computational Methods Using Seventh Derivative Type for the Solution of First Order Initial Value Problems"

Lili Li

Potential competing interests: No potential competing interests to declare.

Comments:

1. Some english presentation needs to be improved, such as no space after a punctuation mark, no punctuation after the formula and so on.
 2. P. 8: The test equation should be $y' = \lambda y$.
 3. The numerical methods does not explicitly give the order of convergence.
 4. Numerical experiments show only the absolute error not the order of convergence.
- Hence I suggest this manuscript can be accepted after some written English should be improved.
