The topic review is very interesting and will brought thorough knowledge for researchers working on Nano particles against skin diseases, but i think the author wrote the article in hurry. In my point of view author should include at least one protocol for copper nanoparticle synthesis and its absorbance in spectrum so that new researchers who is willing to do research in this area get the help from this article. Heading 4.2 where author is discussing about the nanoparticle against various viral skin diseases need a table so that one should know the copper Nano particle can be used against these viruses or skin diseases. Heading 2.3 discussing about mechanism of action of Nano particle but i have not seen any mechanistic discussion. Rest of the headings need to include more knowledge and research.
