

Review of: "Additive and Multiplicative Operations on Set of Polygonal Numbers"

Carlos Andres Martos Ojeda¹

¹ University of Cauca

Potential competing interests: No potential competing interests to declare.

The document lacks rigor since it is not clear which results are known and which are the author's. Furthermore, the bibliography is not consistent; only a single article listed in it is referenced. Are there other authors who work on the topic? It seems not, because the author of all the references is the same. The following references could be included: Polygonal Numbers and Common Differences, Siavash Aarabi, Howard Community College, 2017, University of Southern California Mentored by: Mike Long, Ed.D & Loretta FitzGerald Tokoly, Ph.D and chrome-extension://efaidnbmnnnibpcajpcgclefindmkaj/https://core.ac.uk/download/pdf/77977823.pdf
