The subject is very interesting and very current.

The review, as presented, is of an informative type. It is well documented by an extensive bibliography. It examines the effect of climate change on the effectiveness of pesticides in a clear and detailed way. As a result, the analysis carried out highlights the importance of adopting sustainable practices and adaption strategies in order to limit or overcome the negative effects of climate change.

The paper is well articulated, at times there are repetitions that could be eliminated. The introduction could be shortened by summarizing the concepts which are repeated and expressed in the single paragraphs.

Overall, the work is original and very stimulating.
