Dear Author,

First of all, I would like to congratulate you for your article on Sustainable Agriculture and Climate Resilience. However, in order for your article to gain quality, it would be a good idea to pay attention to the feedback I have tried to write below and what other referees wrote.

Regards.

1. The summary is unnecessarily long, it would be better to shorten it. Purpose, importance, method, striking findings and suggestions directly related to them will be sufficient.
2. There are too many transfers and word inconsistencies. For example, "Türkiye" is used in some parts of the text and "Turkey" is used in others.
3. It is written that economic modelling, policy analysis and literature evaluation were carried out. However, modelling, analysis and review/evaluation are not included consistently in the text.
4. Any researcher who just reads the title will suggest "more sustainable agriculture". You are expected to suggest how this could happen based on scientific data and method.
5. Many information transfers do not contain citations.
6. It would be a good idea to enrich your bibliography and make a comprehensive analysis and evaluation within the text.
7. There is additional information for an article throughout the text. It would be good to condense these and rewrite them in a more coherent and understandable way.
8. It would be good to discuss scientific studies from countries where there are exemplary studies on this subject.
9. You need to specify the data sources of the tables and figures.
10. It would be a good idea to organize your article under the headings of abstract, introduction, purpose-method, findings, result-evaluation, and bibliography.
