

# Review of: "Exploring the Link between Climate Change and Farming in Rural and Peri-Urban Communities in Sierra Leone"

Samane Ghazali

**Potential competing interests:** No potential competing interests to declare.

The manuscript on "Exploring the Link between Climate Change and Farming in Rural and Peri-Urban Communities in Sierra Leone" explains qualitative explanations. However, there aren't any models or new methods in this manuscript. The results are from gathered data and not based on a model or scientific methodology. Hence, this is not enough to consider this manuscript for publication. Therefore, I suggest estimating econometric regressions, e.g., logit or probit models. In addition, the writing needs professional English editing. For example, this sentence "In a study by Habib-ur-Rahman, et al., (2022) in Asia, it is stated that as a result of climate change, it is predicted that there will be a yield reduction of rice by 15.2% and 14.1% in wheat production." or "More than sixty percent (60.7%) are married; others are single (18.0%), widowed (10.7%), or separated/divorced (7.3%)."

In addition, in the Introduction section, don't mention the novelty of the study. What is the contribution of your study to the literature?
