Potential competing interests: No potential competing interests to declare.

The study investigated the phytochemicals from different parts of the plant and used different solvents to extract compounds. The study does not show why the use of different solvents was necessary because the results are almost similar. The study did not have any new discoveries, and the discussion lacked support for the data obtained. The discussion only reported results but failed to explain why the author got the type of results they got and to compare their results with findings from other papers.
