# Linoglriride

National Cancer Institute

## Source

National Cancer Institute. *Linoglriride*. NCI Thesaurus. Code C66015.

A guanidine-based insulin secretagogue and structural analogue of pirogliride with hypoglycemic activity. Linoglriride blocks ATP-sensitive potassium channels on the membranes of pancreatic beta cells which stimulates the secretion of insulin and improves glucose tolerance. This agent is associated with CNS toxicity.
