Potential competing interests: No potential competing interests to declare.

## Strengths:

Comprehensive Coverage: The article provides a review of the importance of quality management systems, specifically ISO 9001, in architectural practices, with a particular focus on the Tunisian context. This comprehensive coverage ensures that readers gain a deep understanding of the subject.

Practical guidance: The article stands out for offering detailed practical guidance on implementing a quality management system, with concrete examples of processes and performance metrics, making it particularly useful for practitioners in the field.

Critical analysis: The discussion on the benefits and challenges of adopting ISO 9001 and other standards provides a critical analysis that balances the presentation, allowing readers to consider both the advantages and potential difficulties of implementation.

## Areas for Improvement:

It is crucial for the author to clearly describe the research method adopted for gathering and analyzing the information presented.

- The article should detail how and from where the data or information was obtained.
- It should be clarified how the collected information was analyzed.
- To ensure the reliability and validity of the results, the author should describe the procedures used to validate the findings. This may include data triangulation, peer validation, or cross-verification with existing studies.

Incorporating these improvements will not only increase the reliability and credibility of the study but also allow other researchers to replicate the study or build upon its findings, thus significantly contributing to the existing body of knowledge in the field.
