Auricular abnormalities-cleft lip with or without cleft palate-ocular abnormalities syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Auricular abnormalities-cleft lip with or without cleft palate-ocular abnormalities syndrome. ORPHA:77300*

The association of auricular abnormalities and cleft lip with or without cleft palate has been described in two siblings. One sibling had postauricular pits, profound myopia, nystagmus and retinal pigment abnormalities. The second sibling was a fetus (gestational age: 23 weeks) with severe cleft lip, cleft palate and external ear abnormalities.
