Manuscript outlines rationale and methods to conduct a systematic review + meta-analysis of using telerehabilitation to improve static and dynamic balance among older adults. The paper is well-written and clearly describes the issue and their approach to select and review published studies. The authors propose using appropriate approaches for conducting the review, following the revised JBI Checklist for Randomized Controlled Trials. The main critique is that the abstract is written as if the search and review were conducted, but the paper outlines the proposed process for reviewing the selected papers.
