Review of: "Efficient Management of Information Communication Technology Resources in an Organisation"

Ahmad Helmy Mohamad[1]

1 Misr International University

No potential competing interests to declare.

1- The paper is well-structured, with clear headings and subheadings, making it easy to follow. The abstract provides a concise summary of the paper's key points, and the introduction sets the stage for the study.

2- The methodology section is insufficiently detailed. It does not provide information about the sources and databases used for the literature review, specific search terms, or inclusion/exclusion criteria for selecting references. Without a clear explanation of the research process, it's challenging to assess the rigor and reliability of the paper's findings.

3- The discussion of findings seems incomplete. It introduces the importance of resource planning but does not explore this topic in depth or provide practical insights. The section should be expanded to provide a more comprehensive analysis of the research findings and their implications.

4- Some of the references cited in the paper are relatively old, dating back to 2015 or earlier. Given the rapidly evolving nature of information technology, it is crucial to incorporate more recent sources to ensure the information remains up-to-date.

5- The paper lacks consistency in formatting and citation style for references. This inconsistency can detract from the overall professionalism and readability of the paper.

6- The paper contains grammatical and typographical errors, which can affect its clarity and readability. It would benefit from thorough proofreading to improve the overall writing quality.
