Potential competing interests: No potential competing interests to declare.

Suggestion 'Introduction'

The discussion should be organized following a precise logic, namely:

- description of the Covid-19
- analyze the impacts it has had on economic activities and on the food system at a global level (example: reduction in food availability, reduction in economic/physical/social access to food, change in consumption choices, etc.)
- specify what is meant by food insecurity (one could refer to the concept of Food access, food affordability and food availability)
- Analyze impacts (on food consumption preferences) generated by the covid-19 in the municipality of Kira (district of Wakiso, Uganda)
- further analysis of the literature is required

Suggestion 'Materials and Methods'

- Use appropriate language to communicate the methodological part (review the first verse of chapter 2). In this chapter it would be useful to describe the methodology and how it was adapted to the case study in order to then provide all the research results.
- chapter 2.1 would be more appropriate to have it in the introduction part.
- The questionnaire was distributed to a number of 70 people, but the number of the population of Kira should be clear.

Suggestion 'Discussion of findings'

- The sentence: 'This study concluded that modernizing agriculture in the country is the only way to address food abundance and scarcity following a pandemic' is reported 2 times
