

# Review of: "The Influence of Hot Extrusion on The Mechanical and Wear Properties of an Al6063 Metal Matrix Composite Reinforced With Silicon Carbide Particulates"

Binayak Sen

Potential competing interests: No potential competing interests to declare.

The paper is commendably well-written, demonstrating a clear and comprehensive understanding of the subject matter. The authors have effectively conveyed their ideas and findings with clarity, making the content accessible to readers. However, to further enhance the overall quality of the research, attention should be given to improving the quality of the scanning electron microscopy (SEM) images. Ensuring higher resolution and detail in these images would significantly contribute to the precision and credibility of the presented data, ultimately strengthening the paper's scientific impact.
