**Potential competing interests:** No potential competing interests to declare.

The results of the work are interesting, and if reliable and repeatable, they shall be significant to the construction field, as well as the recycling community.

I advise the authors to add a brief statement on the difference between thermoplastic and thermosetting polymers so that the construction community understands that not all types of polymers are appropriate for this application. Generally, the construction industry uses some polymers, and they are usually thermosetting and not suitable for this application.

All I mean is that to make this work well disseminated, the authors may add some statements addressing the construction community because usually they may not be aware of materials relationships and fundamentals.
