Magnusiomyces capitatus

National Cancer Institute

Source

National Cancer Institute. *Magnusiomyces capitatus*. NCI Thesaurus. Code C114263.

A yeast in the phylum Ascomycota. This species forms branched hyphae, and hyaline, ellipsoidal ascospores, and assimilates glucose, galactose, ethanol and glycerol. *M. capitatus* is an opportunistic pathogen and has been isolated from the human digestive and respiratory tracts as well as the blood of immunocompromised hosts.
