

Review of: "Improvement in Cervical Spinal Misalignment After the Application of the Neuromuscular Atlasprofilax Method in one Single Session. A Case Report."

Daniele Armocida

Potential competing interests: The author(s) declared that no potential competing interests exist.

The authors present a case report on evaluation by frontal RX in the Atlasprofilax Method. Although it is a case report the topic and explanation are clear and interesting. The introduction is too brief and does not make a true background of the literature. The conclusions on the contrary are long and speculative. The pictures could be better explained.
