**Potential competing interests:** No potential competing interests to declare.

I am excited about the opportunity to review this manuscript and to provide constructive feedback that can potentially enhance the overall quality of the paper.

- To enhance the comprehensiveness of the discussion section, it is advisable to conduct a more in-depth exploration into the multifaceted impact of the pandemic on both healthcare and educational systems in the Khyber Pakhtunkhwa region. Elaborate on the distinct modifications that the pandemic has induced, offering a nuanced perspective on the manner in which these adaptations might have potentially influenced the outcomes witnessed in your study.
- Furthermore, delving into the underlying factors that might have contributed to the upsurge in infections subsequent to the lockdown period, coupled with a thorough analysis of the implications of cases of reinfection, can significantly augment the analytical depth of your study.
- Moreover, while your mention of utilizing SPSS for analysis is duly noted, it could prove advantageous to concisely elucidate the specific analytical methodologies you employed. Providing a succinct overview of whether your analysis was predominantly focused on descriptive statistics, cross-tabulations, or if other analytical techniques were incorporated would grant readers a more lucid comprehension of the procedures employed to extract insights from your amassed data.
