TFG/ALK Fusion Gene

National Cancer Institute

Source

National Cancer Institute. *TFG/ALK Fusion Gene*. NCI Thesaurus. Code C101075.

A fusion gene that results from a chromosomal translocation $t(2;3)(p23;q21)$ which fuses a portion of the 5' part of the TFG gene to the last 10 exons of the ALK gene. This rearrangement is associated with anaplastic large cell lymphoma.
