

Review of: "IoT Noise And Air Quality Observation System"

Sarmistha Neogy

Potential competing interests: No potential competing interests to declare.

The paper does not seem to have any research component. This is the description of a project that can be performed during the first one/two years of any Bachelor's degree. However, the project has potential. The work can be enhanced by using lots of data that can be collected through the experiments and utilised later to provide warnings in advance. Other features can be explored and added as well.
