

# Review of: "Psycho-Emotional Impact of the First Wave of the COVID-19 Pandemic in Health Care Workers of a Large COVID-19 European Hospital"

Bogdan Socea<sup>1</sup>

<sup>1</sup> Carol Davila University of Medicine and Pharmacy

Potential competing interests: No potential competing interests to declare.

Considering the field of interest and the specialized references on the subject, I appreciate that more references can be added.

In the discussion chapter, the authors would do well to emphasize the burnout syndrome (Dimitriu MCT, Pantea-Stoian A, Smaranda AC, et al. Burnout syndrome in Romanian medical residents in time of the COVID-19 pandemic. *Med Hypotheses*. 2020 Nov;144:109972. doi: 10.1016/j.mehy.2020.109972), and the Maslach original questionnaire or the modified versions (cite: Cotel A, Golu F, Pantea Stoian A, et al. Predictors of Burnout in Healthcare Workers during the COVID-19 Pandemic. *Healthcare (Basel)*. 2021 Mar 9;9(3):304. doi: 10.3390/healthcare9030304).

A particular aspect is the situation in the obstetrics departments. (Matei, A.; Dimitriu, M.C.T.; Cirstoveanu, C.G.; Socea, B.; Ionescu, C.A. Assessment of Postpartum Depression in Adolescents Who Delivered during COVID-19 Social Restrictions: The Experience of a Tertiary Hospital from Bucharest, Romania. *Healthcare* **2021**, *9*, 807. <https://doi.org/10.3390/healthcare9070807>).
