Review behaviour goal BCT

Behaviour Change Intervention Ontology (BCIO)

Source

Behaviour Change Intervention Ontology (BCIO)

Definition: A that reviews a behavioural goal and considers modifying the goal in light of progress toward the goal.

Comment: A goal is a cognitive representation of an end state towards which one is striving. If goal specified in terms of behaviour, code this class; if goal unspecified, code 'review outcome goal BCT'; if discrepancy created consider also 'attend to discrepancy between current behaviour and goal BCT'; if modifying the plan to achieve the goal consider also 'review behaviour goal plan BCT'.

This definition was imported from the Behaviour Change Intervention Ontology (see <https://bciosearch.org/>). Comments and suggestions for improvements are welcome using the Qeios review system.

Definitions imported from the Behaviour Change Intervention Ontology (BCIO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.

Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.

Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.

Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.
