Potential competing interests: No potential competing interests to declare.

The article provides an extensive overview of the COVID-19 pandemic, with a notable gap in the discussion of its psychological effects. While transmission methods receive considerable attention, there is a need for a more comprehensive exploration of the literature to solidify certain points, such as animal-to-human transmission, which lacks definitive evidence. To enhance the paper, I recommend dedicating additional space to a thorough review of existing research. The abstract should be reframed to clearly articulate the paper's objective, considering that the current lack of clarity diminishes its overall appeal. Moreover, for a more robust discussion on health concerns, it is advisable to incorporate statistics on respiratory cases, cardiovascular cases, pneumonia, cardiology, and other relevant factors. This addition would distinguish your review from others and provide a more comprehensive foundation for the claims made in the article. Consider incorporating additional points to enrich the discussion further.
