Thank you, author, for your time and effort in preparing this article. It was an interesting read. However, I think this paper needs major revision. Following are some of my suggestions for the revision of this article.

In the introduction section, the author may include the background for his work with a relevant literature review. It is also suggested to include what the reason and significance of his choice in selecting the methodology are. The author may also consider identifying the novelty or new point of his work.

In the methodology section, I think it is useful to include the reason for the study area selection and mention the significance of that area for the country. I suggest adding some detail about the location of the monitoring section from where the data were collected. The author may also include the data types and add the data sources used in this study.

In the results section, please describe all the tables and figures used in this study in detail and analyze your findings. It is also useful to provide a precise conclusion with relevant recommendations and limitations (if any). Please also include a discussion by comparing your results with previous findings and explain the reason for similarities or differences. The reference section appears to be insignificant. This study may include more references (e.g., 20 or more) from recent studies (e.g., 2020 or more recent), and all the figures and tables need to be prepared properly before publication. I wish the author all the best with further revision work.
