Respected Authors, It is an intriguing study. The findings are revealing backed by facts and figures. The amount of clarity provided in terms of providing details of methods, background and the objective itself is definitely appreciable. The study is presented in a scientific way which is an extension of what common man as well as other key stakeholders felt during this pandemic times.

Since the study is all about numbers, there are few statistical tests that can employed such as the t-test and ANOVA to see whether the numbers are significantly different from pre-pandemic era to pandemic years.

In a few places, the writing could be more crisp and to the point. Repeating of few phrases can be avoided.

All the Best.
