Potential competing interests: No potential competing interests to declare.

Interesting and well-structured paper. Maybe the analysis needs to be a little more critical, and unpack some of the contestations around CLD and delve deeper into reasons why it works or doesn't work. The conclusion needs to be more in-depth, and summarise the arguments of the paper more clearly. I also feel that an academic paper that examines CLD should put communities themselves at the heart of the argument, rather than donors or international community.
