Potential competing interests: No potential competing interests to declare.

The author presented his hypothesis in an entertaining and eye-catching way. The work is beautifully prepared. Unfortunately, the well-established physical hypotheses he opposes have been supported by many experiments and observations over the years. The hypothesis he puts forward is based on assumptions and does not bring innovations in the field. However, I think such a well-prepared study could be useful, as I hope it will contribute to new and enthusiastic researchers.
