Potential competing interests: No potential competing interests to declare.

1. Check the typo error
2. Enhance the discussion section
3. Give suitable reference to governing equation
4. Enhance the abstract section by quantitate result
5. Please ensure that the similarity rate is below 20% with max 3% from a single source.
6. Units of all symbols should be given in Nomenclature.
7. The key findings in Conclusion section should be provided with supported quantitative data.
8. In the Introduction, the literature review was not logically organized and all literatures cited seem separate descriptions without connections. The readers can't know what the state-of-art methodologies or gaps the current study plans to resolve or fill, and how significant or what contribution the current study is?
