Review of: "Chronic disease treatment default prediction with random sampling optimization."

M. Gowri Shankar[1]

1 Bannari Amman Institute of Technology

1. Authors mentioned various research works in the Introduction section to define the problem, but they are less cohesive with the proposed problem.

2. I suggest making a table of the existing works with specified columns indicating the datasets used, feature considered, evaluation metrics with corresponding obtained results and the techniques used in a hierarchal manner to increase the readability.

3. The paper has various typos and grammatical mistakes. The writing language and paper structure must be modified significantly.

4. The challenges in the implementation of the proposed framework must be stated carefully.

5. Conclusion section can be improved by highlighting key findings, limitation of the research and recommendation for future studies.
