Anti-VEGF Anticalin PRS-050-PEG40

National Cancer Institute

Source

National Cancer Institute. *Anti-VEGF Anticalin PRS-050-PEG40*. NCI Thesaurus. Code C91376.

A pegylated, proprietary lipocalin that targets human vascular endothelial growth factor (VEGF), with potential antineoplastic activity. Pegylated anti-VEGF anticalin PRS-050 specifically targets and binds to VEGF receptor 2 (VEGFR2 or KDR), thereby preventing its activity. This may inhibit angiogenesis and eventually reduce tumor cell growth.
