**Potential competing interests:** No potential competing interests to declare.

It is really a nice article and also the need of the hour. The title can be reframed to exhibit the study findings. Theory support is required, as the authors spoke about blended learning and online education. It is suggested to collect the footprints of recent reviews to support the statement of problem. Research methodology can be strengthened. Recommendations need to be strengthened. It is appreciated for the use of logistic regression, which suffices the objectives.
