Hi dears;

Research strengths:

- 1- Attention to social and widely used categories.
- 2- Attention to social determinants affecting health, especially in traffic.

Recommendation:

- 1- Please more explanation about the driving culture in India and the city in question for the information of the readers
- 2- Determine the reason for choosing undergraduate medical students.
- 3- It should be explained about the type of vehicles used and their difference in terms of speed and safety and the standard of the type of vehicle.
- 4- The validity and reliability of the questionnaire should be explained.
- 5- Considering the scope of the issue, the number of samples is not enough to draw conclusions.
- 6- The number of non-participants in filling the questionnaire and their drop should be determined and brought into the discussion.

thanks.
