Potential competing interests: No potential competing interests to declare.

I find they have prepared the paper following standard academic writing norms. And under normal circumstances, I would recommend this for publication.

On not-so-normal academic practices, whereby heterodox views are observed, I recommend the researchers scrutinize the most current central banking publications on banking, debt, and finance. Particularly on the role of money and interest rates. One particular recent research that deals with a similar issue as presented by the authors, is the paper by these authors (Bermejo Carbonell and Werner 2018; Ryan-Collins et al. 2012; Gross and Siebenbrunner 2019; Kumhof and Jakab, n.d.; Bezemer et al. 2018; Bundesbank 2017b; 2017a; Lee and Werner 2018). Particularly by Bermejo Carbonell and Werner (2018), who show that FDI does not influence the economy of the alleged recipients, and Lee and Werner (2018) who discuss the role of interest rates relevant to economic growth.

I think, by not including these publications, the paper lacks rigor and stands on shaky ground because these kinds of literature show that what we have learned to be true in academia turns out to be incorrect including the role of interest rates.
