Minor revision

The content of the manuscript can be accepted for publication after minor revision.

1. The manuscript can help the clinician to get the information about treating patients with bisphosphonate-related osteonecrosis of the jaws, so the topic is of practical importance.

2. In the **Material and method section**.

Statistical methods are basic tools in the research and data analysis, but in the manuscript, there is no report about any statistical methods.

3. In the Figure section there is no Figure numbered: 1, 2, 3 and 4.

4. The **Reference section** should be updated with more references that are from recent literature data. It is important to use references that are under 5 years until the present.

The manuscript included 26 references and all references are older than 10 years except 3 references that are exactly 10 years old.
