Cataract-ataxia-deafness syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. Cataract-ataxia-deafness syndrome. ORPHA:1368

Cataract-ataxia-deafness syndrome is characterised by mild intellectual deficit, congenital cataract, progressive sensorineural deafness and ataxia. It has been described in two sisters. The inheritance is likely to be autosomal recessive.
