

Review of: "Hydroxyapatite coating techniques for Titanium Dental Implants — an overview"

Enrique Rocha-Rangel

Potential competing interests: No potential competing interests to declare.

In his work, the author makes an extensive review of the existing literature related to different techniques for coating titanium dental implants with hydroxyapatite. The introduction is good because it explores in a comprehensive way the benefits and limitations of using different materials as implants in the human body. Justifying in this way why the study of titanium coating with hydroxyapatite. Subsequently, the work focuses on the review of the multiple existing techniques to carry out these coatings and their influence on the characteristics of the resulting material. While the review is comprehensive and provides good arguments on the advantages and disadvantages of both techniques. At the end of the document, in my opinion, the author should have presented a summary, either in a table or as a written text summarizing concisely the advantages and disadvantages of each coating technique analyzed. Therefore, it is requested that this summary be presented at the end of the document, so that the work can be published.
