Potential competing interests: No potential competing interests to declare.

This mini-review has been prepared to summarize the information on foodborne RNA viral infections in humans. Since they are the most prevalent RNA viruses, it has been focused on Hepatitis A and Norovirus infections. Therefore, I suggest revising the title to "Global Impact of Hepatitis A and Norovirus as Foodborne RNA Virus Infections."

Also, there are repetitions in the abstract. The first and fourth sentences should be merged.
