PATZ1/UQCRH Fusion Gene

National Cancer Institute

Source

National Cancer Institute. *PATZ1/UQCRH Fusion Gene*. NCI Thesaurus. Code C99864.

A fusion gene that results from a complex chromosomal rearrangement where inversion of 22q12 is followed by a translocation t(1;22)(p34;q12) that disrupts intron 3 of the UQCRH gene. PCR analysis of tumor cDNA and genomic DNA detected a PATZ1/UQCRH fusion transcript but it is out-of-frame and contains premature stop codons.
