Review of: "Comprehensive Classification of Web Tracking Systems: Technological Insights and Analysis"

Sujala Shetty¹

1. CS, Birla Institute of Technology and Science, India

The paper is a comprehensive study on Web Tracking Systems. The study is pretty comprehensive in terms of different perspectives covered. Five different tracking systems are identified, and a comparison is done on different criteria. A survey has also been conducted, and the questionnaire is shared.

The paper, however, could be better structured. In its current form, it fails to hold the attention of the reader and to clearly highlight the factors on which the study is based.
