Generalized Arterial Calcification of Infancy 1

National Cancer Institute

Source

National Cancer Institute. *Generalized Arterial Calcification of Infancy 1*. NCI Thesaurus. Code C128805.

An autosomal recessive genetic disorder caused by mutations in the ENPP1 gene, encoding ectonucleotide pyrophosphatase/phosphodiesterase family member 1. The condition is characterized by calcification and narrowing of medium- and large-sized arteries, resulting in cardiovascular complications.
