Sorry for the delay in sending the review; I had health problems and was unable to finish it in the agreed time.

The article is good and has significant data. I proposed some changes just.

Introduction

- A numerical citation, standardize.

Methodology

- Enter the herbarium deposit registration number.
- What is the difference between these 18 albino mice and the 24 male albino mice?
- Is N=4 adequate to reach conclusions? Wouldn't a larger N be statistically necessary?
- Was a normality test performed? Which?

Conclusion

- The conclusion could be more specific in relation to the findings; it was generic and does not emphasize the importance of the data obtained.
